

Industrial Boiler Monitoring

Whenever a boiler tripped the customer needed an alert to enable engineers to respond rapidly to reduce production down-time.

Excellence in Industrial Cloud Monitoring

The complete system was designed and built by Listo, based on the customer's requirements.

- ▶ The  AGAD PORTAL provides a complete site monitoring solution.
- ▶ Harvesting relevant data from our intelligent interface modules or customers' equipment and storing the information on the  AGAD PORTAL cloud, placing all data in a central location for viewing and exporting to other packages.
- ▶ It provides Real-time and historical, user-friendly, observation and interrogation of information, viewable on any web-enabled device.
- ▶ This was a simple application that required boiler pressure monitoring with alert notification capability.
- ▶ An analog module and a pressure transmitter were fitted to the system.
- ▶ Data is sent to the  AGAD PORTAL for storage to enable monitoring and trending of boiler pressure.
- ▶ Email and SMS alerts were set up and activate when Low Pressure is identified.
- ▶ With rapid response, the client is saving on average 4 hours of lost production.
